

**Pre-Lesson Assignment:**

Students will complete the worksheet **Math Placement Test Lesson Pre-Assignment**. This will ask them to do some research regarding what the math placement process will be at the school they plan to attend.

**Lesson:**

- Introduction by teacher of Megan Luce, Math Faculty from Cascadia Community College and lead of the Transition Math Project
- Megan explains who she is and why she is visiting
- Students share with a partner or in small groups what they found out about placement tests
- The Math Placement Test Overview is handed out and discussed
- Megan answers any questions that the students may have regarding the placement test process
- Students are placed into partners or small groups to work on the 10 practice question flashcards
- If time, class discusses the variety of topics that are on the placement exams

Teachers may want to follow up this lesson by going over some of the math questions that come up from students working on the flashcards.
