

Math Placement Test Lesson Pre-Assignment

What are two colleges or universities that you are considering attending next year? (If you already know where you are going, list it first, and then another school that you had considered at some point. If you don't know yet, just pick any two schools.)

School A:

School B:

Most schools require new students to take a math placement exam. Your assignment is to do some internet research on what your two schools require. It is recommended that you start by going to their websites. You may want to look at information for new students, the math department website, or search within a school's website for a math placement test. Find out as much information as you can for each of your schools. Some questions to answer include:

- What is the name of the test?
- When can you take it?
- How much does it cost?
- Can you retake it?
- Can you use a calculator?
- Is it multiple choice?
- Do you take it on paper or on the computer?

Record your information below.
